

8 LIVE ATTENDEES

## New Surgical Procedure Demonstration

Relievent Medsystems is a privately held medical device company that has developed a new minimally invasive procedure for the relief of chronic vertebrogenic low back pain.

Following a successful pilot study, trial and study, when it came to demonstrating the ground-breaking procedure to a small group of elite medical professionals, Relievent chose the OLC Education & Conference Center to host their medical meeting.

With new COVID-19 safety and preparedness protocols in full effect to maximize the safety of all participants, Relievent staff used the OLC's fully-equipped bio-skills lab to conduct the demonstration.

“ The early feedback from our attendees has been great! The entire OLC team was very attentive and made sure we had everything we needed.

- TONY DITIRRO, DIRECTOR, CLINICAL EDUCATION & DEVELOPMENT

The attendees had a great experience with many takeaways. I'm looking forward to working together in the future. ”

- JONNIE MCKEE, TRAINING & EDUCATION SPECIALIST

For more information about hosting a new surgical procedure training at the OLC, please contact us.
